CSL SIGNAL ANALYSER
The Perfect Signal For Your Connected Device

CSL Signal Analyser is intended to be used to identify the optimum location for your connected device prior to installation.

Designed to relay accurate and essential data, to ensure the best installation every time. It measures and displays radio signal strength and is available in 2G and 4G versions.

Information is fed back to the device, including the network provider, radio technology, signal quality and signal strength. No SIM is required to perform network surveys which you can also save for future reference.

CSL Signal Analyser is ideal to use for alarm signalling, 4G routers, deploying parking meters/smart meters, telehealth products and more.

- Ideal for deploying any mobile application

- Live monitor function to find the optimum installation location (SIM required for 4G)

- 4G versions are backwards compatible (2G/3G/4G)

- 2.4Ghz Wi-Fi (4G version only)

- Rechargeable battery with up to 20 hours life

- Multilingual - 10 languages

- Download survey results and live monitor results via USB

- Rain resistant material and durable protective case provided

- Automatic power down when not in use

- Firmware upgradeable
